Peasant Society and Marxist Intellectuals in China

Fang Zhimin and the Origin of a Revolutionary Movement in the Xinjiang Region

KAMAL SHEEL

"This study belongs to the genre of sophisticated political economy with which the author has skillfully combined biography. Sheel's book will bring new depth of understanding to the Jiangxi Soviet period of Chinese Communist history."

—Herman W. Mast III,
University of Connecticut

Whereas most writing on the Communist Revolution in China has concentrated on the influence of intellectual leaders, this book examines the role of peasants in the upheaval, viewing them not as a malleable mass but as a dynamic social force interacting with the radical intelligentsia. Focusing on the Xinjiang region, this study traces the historical roots of the early twentieth-century agrarian crisis that led to a large-scale revolution in the late 1920s, one of the most successful peasant movements organized by the Chinese Communists. A fresh analysis emerges of the remarkable Marxist intellectual Fang Zhimin, who used his deeply entrenched rural connections to organize the movement through a creative synthesis of traditional folk concepts with modern Marxist thought.

This history begins with the impact of the Taiping Rebellion and proceeds to document the rapid disintegration of the small peasant economy under the pressures of world economics, a "state in crisis," and a qualitatively different landed upper class. It discusses exploitation, protest, and rural uprisings in the context of the "crisis of paternalism," marked by a progressive deterioration in

Policies of Chaos

The Organizational Causes of Violence in China's Cultural Revolution

LYNN T. WHITE III

The tumult of the Cultural Revolution after 1966 is often blamed on a few leaders in Beijing, or on long-term egalitarian ideals, or on communist or Chinese political cultures. Lynn White shows, however, that the chaos resulted mainly from reactions by masses of individuals and small groups to three specific policies of administrative manipulation: labeling groups, designating bosses, and legitimating violence in political campaigns. These habits of local organization were common after 1949 and gave the state success in short-term revolutionary aims, despite scarce resources and staff—but they also drove millions to attack each other.

Policy Making In China

Leaders, Structures, and Processes

KENNETH LIEBERTHAL AND MICHEL OKSENBERG

From interviews with over a hundred Chinese bureaucrats and foreign businessmen and from new documentary evidence, the authors present a richly detailed analysis of the Chinese energy industry that speaks to issues well beyond the energy field. Tracing the evolution of post-Mao policy toward three major energy projects (Shanxi coal, South China Sea petroleum, and the Three Gorges dam on the Yangtze), they outline a new theory of the organization of power in contemporary China.

"This is a landmark volume because of the mix of new case study material and the intellectual framework that the authors have developed. They move us a major distance in fleshing out the processes, the layering of authority, and the issues over which political warfare in China is fought."—David M. Lampton, *National Committee on United States-China Relations*
